gpt-5 | LRU | Spontaneous comparisons

No generation prompt requests metaphor. Teal = present; gray = absent. Unvalidated judge labels; inspect flagged cases before interpreting rates.

Supplied excerpt in the with-excerpt conditions:

A cache stores copies of data so that later requests can be answered more quickly. Its capacity is limited. Under a least-recently-used (LRU) replacement policy, reading or writing an item updates its recency. When space is needed, the policy prioritizes removing items that have gone longest without being read or written. Reading an item can therefore protect it from removal.

Without-excerpt conditions receive only the topic, audience, and requested 120-150 word length.

No generation prompt requests metaphor. Teal = present; gray = absent. Unvalidated judge labels; inspect flagged cases before interpreting rates.

Supplied excerpt in the with-excerpt conditions:

A cache stores copies of data so that later requests can be answered more quickly. Its capacity is limited. Under a least-recently-modified (LRM) replacement policy, writing an item updates its recency, but reading it does not. When space is needed, the policy prioritizes removing items that have gone longest without being modified. Reading an item cannot therefore protect it from removal.

Without-excerpt conditions receive only the topic, audience, and requested 120-150 word length.
